CTC Training Webinar Series

Part 1: How to Benchmark Your Practice and Help Advance the Field

NRDR
CTCTM
**CT COLONOGRAPHY
REGISTRY**
AMERICAN COLLEGE OF RADIOLOGY

Learning Objectives

1. Determine how participating in the CTC registry helps the radiology community learn from each other, benchmark our practices, and collect data for advocacy.
2. Identify key data elements and how they populate CTC reports and quality measures.
3. Recall knowledge from a case example to begin to operationalize CTC registry participation at your institution.

Current State of CT Colonography

Current Colorectal Cancer Screening Recommendations in the US

American Cancer Society 2018 Recommended Screening Options

Average risk individuals should be screened from age **45** to 75-85.

Prevention Tests:
detect polyps & cancer

- colonoscopy every 10 years (OC)
- **CT colonography every 5 years** (CTC)
- flexible sigmoidoscopy every 5 years
- ~~double contrast barium enema every 5 years~~

Detection Tests:
detect cancer

- fecal occult blood test (gFOBT) every year
- fecal immunochemical test (FIT) every year
- stool DNA test (sDNA), every 3 years

USPSTF 2016 Screening Strategies

Screening Method	Frequency
Stool-Based Tests	
gFOBT	Every year
FIT	Every year
FIT-DNA	Every 1 or 3 y
Direct Visualization Tests	
Colonoscopy	Every 10 y
CT Colonography	Every 5 y
Flexible sigmoidoscopy	Every 5 y
Flexible sigmoidoscopy with FIT	Flex sig every 10 y plus FIT every y

USPSTF 2016 Final Recommendation

Population	Recommendation	Grade
Adults aged 50 to 75 years	<p>The USPSTF recommends screening for colorectal cancer starting at age 50 years and continuing until age 75 years.</p> <p>The risks and benefits of different screening methods vary. See the Clinical Considerations section and the Table for details about screening strategies.</p>	A
Adults aged 76 to 85 years	<p>The decision to screen for colorectal cancer in adults aged 76 to 85 years should be an individual one, taking into account the patient's overall health and prior screening history.</p> <ul style="list-style-type: none">•Adults in this age group who have never been screened for colorectal cancer are more likely to benefit.•Screening would be most appropriate among adults who 1) are healthy enough to undergo treatment if colorectal cancer is detected and 2) do not have comorbid conditions that would significantly limit their life expectancy.	C

USPSTF 2020 Draft Recommendation

Population	Recommendation	Grade
Adults aged 50 to 75 years	The USPSTF recommends screening for colorectal cancer in all adults ages 50 to 75 years. See the "Practice Considerations" section and Table 1 for details about screening strategies.	A
Adults ages 45 to 49 years	The USPSTF recommends screening for colorectal cancer in adults ages 45 to 49 years. See the "Practice Considerations" section and Table 1 for details about screening strategies.	B
Adults aged 76 to 85 years	The USPSTF recommends that clinicians selectively offer screening for colorectal cancer in adults ages 76 to 85 years. Evidence indicates that the net benefit of screening all persons in this age group is small. In determining whether this service is appropriate in individual cases, patients and clinicians should consider the patient's overall health and prior screening history.	C

Insurance Coverage of CT Colonography

Private Payors
Medicare/Medicaid

Private Payor Covered Indications

- **Screening**

- Affordable Care Act (ACA) requires private insurers to fully cover USPSTF-recommended screening options including CT Colonography
- Most payors covered screening even prior to ACA including the top 5: United, Anthem, Aetna, Cigna, most BCBS

- **Incomplete colonoscopy**

- **Contraindication to colonoscopy**

Medicare/Medicaid Covered Indications

- **Incomplete colonoscopy:**
 - Can be performed on the same day for any reason except *inadequate prep*
- **Contraindication to colonoscopy**
 - Anticoagulation
 - Difficulty with prior colonoscopy
 - Difficulty with or high risk for sedation

ACR Practice Parameters for CTC

■ Technical Guidelines

- Colonic Preparation and Tagging preferred
- Colonic Insufflation (CO₂ or Room Air)
- Low Radiation Dose 16+ slice MDCT (CTDI_{vol} < 5mGy)
- At least 2 patient positions (each segment distended in at least 1 position)
- Full colonic coverage

■ Interpretation

- 2D & 3D workstation recons
- C-RADS (Colonic & Extracolonic Findings)

Registry Participation – Poll 1

What is your current participation with the CTC?

- A. Enrolled and submitting data
- B. Enrolled, but never started submitting data
- C. Enrolled and previously submitted data, but stopped
- D. Not enrolled

Registry Participation – Poll 2

Which other NRDR registries does your institution participate in?

- A. General Radiology Improvement Database (GRID)
- B. National Mammography Database (NMD)
- C. Dose Index Registry (DIR)
- D. Lung Cancer Screening Registry (LCSR)
- E. I don't participate in any other registries

Data Collected

Simplified December 2020

- Demographic information
 - Age, gender, race, ethnicity
- Exam-related
 - Screening or diagnostic?
 - Incomplete colonoscopy?
 - Supine, prone, and/or decubitus?

Polyp Data

Simplified December 2020

- At least one polyp ≥ 10 mm?
- Was polyp confirmed at optical colonoscopy or surgery?
- Option to indicate that colonoscopy not performed or unknown (outside referral)
- Indicate histology of confirmed polyp(s)

Outcome Measures

Tabulated by ACR & Reported to You

- Rate of colonic perforation
- True positive rate
- Clinically significant extracolonic findings

Benefits of Participation

- Semi-annual reports from ACR
- Free access to registry data & ACR analyst
- Satisfies ABR MOC part 4 requirement
- Marketing toolkit

Use of Screening CT Colonography by Age and Race: A Study of Potential Access Barriers Related to Medicare Noncoverage Based on Data From the ACR's National CT Colonography Registry

Courtney C. Moreno, MD^a, Judy Yee, MD^b, Abraham H. Dachman, MD^c,
Richard Duszak Jr, MD^d, Lenka Goldman, MSE^e, Michal Horný, PhD, MSc^{f,g}

Abstract

Objective: The primary objectives of this investigation were to evaluate the use of screening CT colonography (CTC) examinations by age comparing individuals of Medicare-eligible age to younger cohorts and to determine if the association between use of CTC and Medicare-eligible age varies by race. Although the Affordable Care Act requires commercial insurance coverage of screening CTC, Medicare does not cover screening CTC.

Materials and Methods: Using the ACR's CTC registry, the distribution of procedures by age was evaluated using a negative binomial model with patient age (to capture overall trend), indicator of Medicare-eligible age (to capture immediate changes in trend at age 65), and their interaction (to capture gradual changes after age 65) as independent variables. The association between the number of screening CTCs and age was compared by racial identity.

Results: The CTC registry contained data on 12,648 screening examinations. Between ages 52 and 64, the number of screening examinations increased; each additional age year was associated with a 5.3% ($P < .001$) increase in the number of screenings. However, after age 65, the number of screening examinations decreased by -6.9% per additional year of age above 65 compared with the trend between ages 52 and 64 ($P < .001$). The modal age group for CTC use was 65 to 69 years in white and 55 to 59 in black individuals.

Conclusion: After age 65, the number of screening CTC examinations decreased, likely due, at least in part, to lack of Medicare coverage. Medicare noncoverage may have a disproportionate impact on black patients and other racial minorities.

Key Words: Colorectal cancer screening, CT colonography, health care disparities, Medicare noncoverage

Participation Cost

- **FREE** if your site participates in ACR's Dose Index Registry (DIR) or General Radiology Improvement Database (GRID)
- A la carte pricing based on # of submitting radiologists & sites
 - \$500 per year 1-5 radiologists, 1-5 sites

CTC practice at UT Southwestern

- Clements University Hospital is an academic health center in Dallas, Texas
- Wide range of cases from screening to complex inpatient cases awaiting transplant
- Volume is approx. 2 to 3 cases/week
- 4 radiologists trained to read CTC

Team Approach

- Partnered with our gastroenterologists
- Share a nurse navigator who helps scheduling and educating patients on bowel preps for both traditional colonoscopy and CTC
- Nurse navigator enters CTC data into the NRDR

CTC Report Template

HISTORY: [] . Indication category: []

TECHNIQUE: Contrast - No IV contrast was given. Patient received the standard virtual colonoscopy bowel preparation and tagging oral regime. Automated carbon dioxide insufflations per rectum.

Noncontrast phase - abdomen and pelvis [prone and supine]

3-D imaging - TeraRecon 3-D imaging system was utilized under concurrent supervision

Coverage: []

Adequacy comment: [Adequate bowel preparation and bowel distention]

Complication: []

COMPARISON: [None]

FINDINGS:

Statements: CT colonography is not intended for the detection of diminutive colonic polyps (tiny polyps less than or equal to 5 mm), the presence or absence of which will not change management of the patient. Extracolonic evaluation is compromised by the (low-dose) CT technique and the lack of IV contrast. []

CTC Registry Start up Guide

Modified on: Fri, 26 Mar, 2021 at 5:42 PM

Thank you for your interest in joining the CT Colonography (CTC) Registry! We hope this step-by-step Start-up Guide helps you to get underway with submitting your data and to obtain the most value out of your registry participation.

The following steps pertain to getting underway with the CTC Registry and include links to articles in [Knowledge Base](#), the National Radiology Data Registry (NRDR) user guide.

The NRDR Team welcomes suggestions for how we can improve this guide and your overall experience with CTC Registry start up and ongoing participation. Please send your suggestions and comments to NRDRSupport@acr.org.

I. Assemble Your Team

Bringing together a team comprised of individuals who can contribute varied expertise will help ensure a successful launch and continued operation of the CTC Registry at your institution. Examples of potential roles (some individuals may have multiple roles) are briefly described below.

- **Physician Champion:** oversees the registry implementation process and ongoing participation efforts. The champion likely would be an abdominal radiologist involved with quality improvement efforts
- **Data Coordinator:** enters case data into the online CTC forms. This should be someone very familiar with CTC procedures such as a lead technologist or nurse
- **Information Technology (IT) Specialist:** interfaces with multiple hospital

Registry Participation – Poll 3

If you are not currently enrolled in or not submitting data to the CTC Registry, how likely is your facility to participate within the next year?

- Very likely
- Likely
- Not sure
- Unlikely
- Very unlikely
